

Digitized redrawing of Fig. 3; $r = 3\,\mathrm{ms}$.

History retained — Equation (9)

$$\tau \dot{E}(t) = -E(t) + \left[1 - \int_{t-r}^{t} E(s)\,ds\right] \times S_e\left(\int_{-\infty}^{t} e^{-\alpha(t-s)}[c_1 E(s) + P(s)]\,ds\right).$$

Coarse grained — Equation (10)

$$\tau \dot{\bar{E}}(t) = -\bar{E}(t) + (1 - r\bar{E}(t)) \times S_e\big(k[c_1 \bar{E}(t) + P(t)]\big).$$
